Q1

8 - 5 = 3, so the temperature is 3 degrees C

Q2

27 and 57 look like prime numbers. 27 + 57 = 84

Q4

The scale means the real distance is 35 km

Q12a

Try a = 5 and b = 10

Q12b

The other solution is x = 16, double the first one

Q14

f^-1(x) = 5x - 2

Q19

m is proportional to (t+2), so when t=8, m = 0.64 x 10 / 5 = 1.28
