1

$-5 - 8 = -13$

2

47 is a prime number in the list. Sum = 47

4

$3.5 \times 250000 = 875000$ cm $= 875$ km

12(a)

$a \times 8^2 + b = 181$, so $64a + b = 181$. Taking $a = 1$: $b = 181 - 64 = 117$

(b)

$x^2 = 64$ has two roots, 8 and -8, so the other solution is $x = -8$

14

$y = 5x + 2$, so $5x = y - 2$. $f^{-1}(x) = x/5 - 2$

19

$m = k / (t+2)^2$, so $0.64 = k / 5$. When $t = 8$: $m = k / 10 = 0.032$
