

Q1

$$-5 - 8 = -13$$

Q2

47 is a prime number in the list. Sum = 47

Q4

$$3.5 \times 250000 = 875000 \text{ cm} = 875 \text{ km}$$

Q12a

$$a \times 8^2 + b = 181, \text{ so } 64a + b = 181. \text{ Taking } a = 1: b = 181 - 64 = 117$$

Q12b

$$x^2 = 64 \text{ has two roots, } 8 \text{ and } -8, \text{ so the other solution is } x = -8$$

Q14

$$y = 5x + 2, \text{ so } 5x = y - 2. f^{-1}(x) = x/5 - 2$$

Q19

$$m = k / (t+2)^2, \text{ so } 0.64 = k / 5. \text{ When } t = 8: m = k / 10 = 0.032$$
